FOR YOUR IT DEPARTMENT

The go360 tour folder

What arrives, where it runs, and what it does not do.

go360 delivers each virtual tour as a self-contained folder: static HTML, JavaScript and every panorama, exported from 3DVista Virtual Tour Pro (perpetual licence). The client owns the files and hosts them wherever it decides. No account, no subscription, no recurring cost.

Delivery	✓ **A self-contained folder of static HTML, JavaScript and images**
Which server?	✓ **Any web server: Apache, Nginx or IIS**
Secure connection?	✓ **Works over HTTPS**
Calls to outside services?	✓ **None required**
Ports	✓ **80 and 443 only**
Writes on the server?	✓ **None: static files**
Content Security Policy	✓ **Compatible**
Firewall or reverse proxy	✓ **Works behind a WAF or reverse proxy, with standard logs**
Embedding	✓ **By iframe or direct link, responsive**
Without internet	✓ **Runs offline on kiosks, tablets and VR headsets**
Visitor statistics	✓ **None by default. If you want them, they run on your side and the data stays yours**
Before the roll-out	✓ **An integration test on your staging server**

Before the roll-out. go360 installs a sample tour on your staging server, so your team can check headers, CSP, logs and embedding before the first building goes online.

Visitor statistics: none by default. If the client wants statistics, they run on the client's side and the data stays the client's.

Rights: everything is the client's. On payment, all rights to the panoramas, stills, videos and the tour pass to the client, exclusively and without limit in time, place or medium, online and in print. go360 keeps only the author credit and, with permission, the right to show the work as a reference. The client also receives the full-resolution master panoramas. Rights to third-party content shown (artworks, logos, people) remain with their owners. The tour runs on the 3DVista player: go360's licence covers unlimited tours, and the client's tour runs with it forever.
